EZ Dupe Introduces *Disk Lok* Duplication Systems Prevents unauthorized copying of DVD material

City of Industry, CA (June 25, 2009) - EZ Dupe's new *Disk Lok* systems empowers users for the first time ever, the potential to prevent unauthorized copying of DVD video material. The new systems embed copy-protection onto target discs during the duplication process. This proprietary technology provides layers of protection to videographers, musicians, law enforcement, defense contractors, government and others wishing to conserve the availability of the original material. Also packed into EZ Dupe's *Disk Lok* is the opportunity to lock out the duplicated material from being played on PC's.

EZ Dupe Vice President Howard Kopelson says that these systems create a whole new business category for replicators and camera retailers that can now protect a major revenue stream for their videographer patrons. Adding to *Disk Lok's* appeal is the incorporation of the new SATA technology which affords the fastest and most accurate transfer of video and data information ever. Also every *Disk Lok* unit performs as a standard DVD and CD duplication system. EZ Dupe will additionally support *Disk Lok* with a two year limited warranty and contains an on-board 250GB hard drive.

EZ Dupe is currently distributed in Canada by NVU Electronics Inc (www.nvu.ca). They can be reached at 1-866-411-2NVU or via email at sales@nvu.ca

EZ Dupe is headquartered in City of Industry, California, and its web address is www.ezdupe.com. EZ Dupe enjoys a leadership position in replication technologies and is a preeminent manufacturer of high-performance, DVD/CD, USB, SD, CF and Micro SD duplication systems.
